

Andrew Woodlee

Cybersecurity Software Engineer

Huntsville, Al | anw@andrewnw.com | (256) 755-9555 | andrewnw.xyz | linkedin.com/in/andrew-woodlee
github.com/Cybersshell

Summary

Dedicated and driven cybersecurity engineer with experience in securing systems and software and designing embedded systems. Have hands-on experience doing system administration running and securing cloud and distributed systems using best practices and automation. Currently pursuing a PhD in Computer Engineering, hoping to focus on embedded systems.

Education

University of Alabama in Huntsville, Doctorate in Computer Engineering	Aug 2026 - present
University of Alabama in Huntsville, MS in Cybersecurity (Engineering track)	Jan 2025 - Aug 2026
University of Alabama in Huntsville, BS in Cybersecurity Engineering	Aug 2019 - Dec 2024

Experience

Research Assistant II , The University of Alabama System Management and Production Center – Huntsville, Alabama	June 2023 - July 2024
• Led embedded software development for a City of Huntsville educational robotics project, designing and implementing Arduino based control systems that improved system reliability and functionality. • Engineered audio playback and motion control enhancements, increasing robotic vehicle movement efficiency by 60% and creating a more responsive user experience. • Configured and deployed Raspberry Pi based control infrastructure for a PX 100 robotic arm used in Jackson County Schools STEM programs, enabling hands-on robotics education for students.	

Technical Projects

Backy (https://backy.cybershell.xyz)	Sept 2022 - present
• Includes Go libraries to create a command execution tool • Improves sever administration with 20% time saved • Improves visibility into infrastructure with notifications on completion and failure	
Home server with remote access	Sept 2022 - present
• Uses WireGuard to access home server from VPS • Hosting web applications like Nextcloud • Secured SSH access over VPN	
Cloud Server Administration	Sept 2023 - present
• Hosts mail servers (https://stalw.art), FoundationDB as a backend • Secures FoundationDB with TLS certificates, resulting in 90% reduction in attacks • Hosts applications include Gitea, Linkwarden, and others using Docker • Reduces downtime by 40% with automatic backups	

Entropy Estimation

Jan 2026 - May 2026

- Collaborated with NIST for INSuRE on Graduate Capstone.
- Resulted in estimation near 5% of NIST Standards.
- Estimated min-entropy using Python and provided graphs of results
- Administered team Gitlab.

Wallet Transformer Monitor

Sept 2023 - May 2024

- Developed ESP-32 code that interfaced with an energy sensing chip, temperature sensors, WiFi, and MQTT over SSL.
- Assembled voltage and current sensing, full-bridge rectifier circuits safely

Collaborator, Digital Telepresence

Apr 2022 - Mar 2024

- Collaborated building a new system from the ground up
- Designed novel solutions
- Gained experience with service-oriented MVVM development and separation of concerns

Certifications

Security+ Certified

Current 701

Awards

Department of War Cyber Service Academy Scholarship (DoW CSA) Recipient

Awarded in July 2026

Skills

- Linux, C/C++, Go, and JavaScript • Server Administration
- Git/Git and CI/CD • Embedded Systems - ESP-32, Arduino, and MSP430
- HTML • NodeJS • IDA Pro and Ghidra • IDS/IPS
- Kali, Wireshark, and metasploit
